

# Integrating Services with an Enterprise Service Bus

Sébastien Mosser,  
Lecture #2, 24.09.2018

Previously

Integration is **not** about  
**designing beautiful** systems.

It is about **dealing with**  
**existing** and **crappy** ones.

# Service Interface Styles

---

## Remote Procedure Call

How can clients **execute remote procedures**?

## Message

How can clients interact with remote systems while **avoiding direct coupling** to remote procedure?

## Resource

How can clients manipulate remote data while **minimizing** the need for **a domain-specific API**?

# Case Study: Widget-Gadget Corp.

[Enterprise Integration Patterns]

[Enterprise Integration  
Patterns]

# Use Cases

---

- **Take Orders**

- Web, Fax or Phone

- **Process Orders**

- verifying inventory, shipping, ...

- **Check Status**

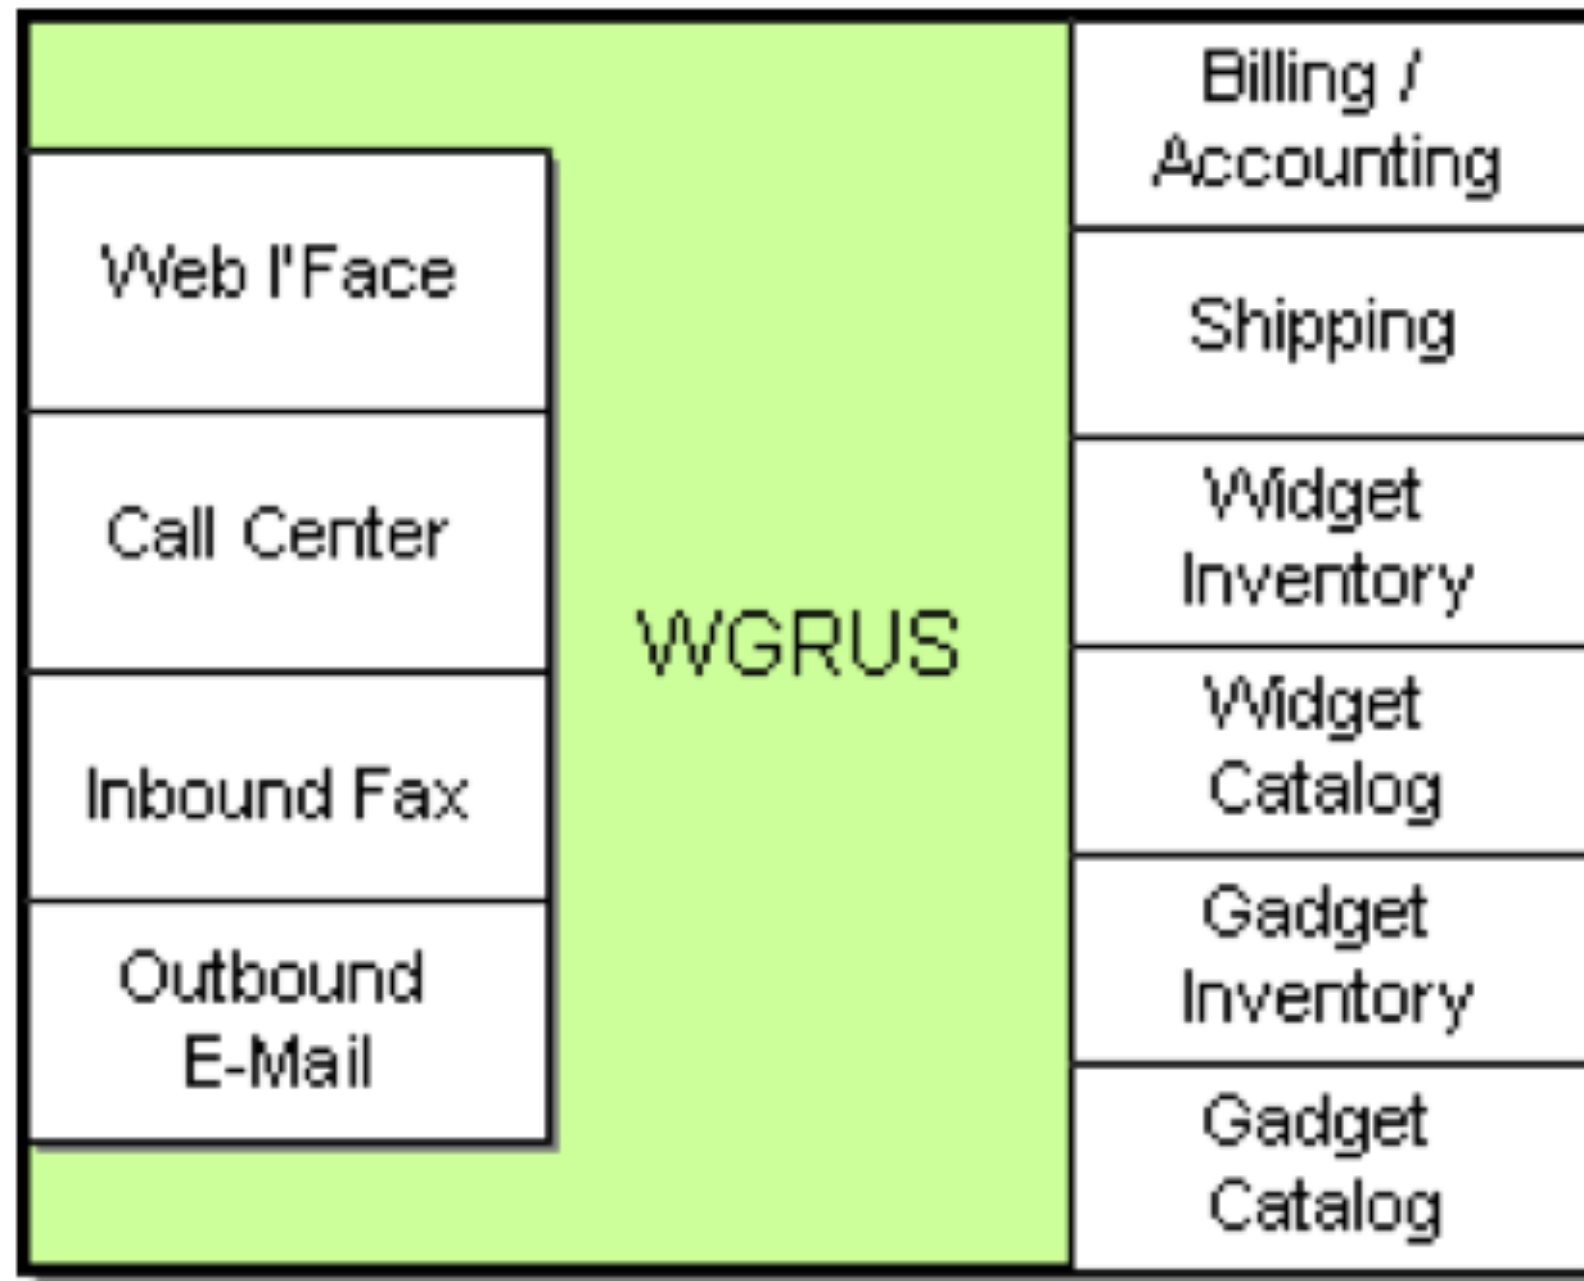

- **Change Address**

- Web page to update user's profile

- **New Catalog**

- support periodical updates

### ***WGRUS IT Infrastructure***
